EXPERIENCE

Astha IT | Software Engineer Level-1

September 2025 – Present

Q1 “Game Changer” Award — Astha IT’s recognition for the quarter’s top-performing engineer.

Project: Docomate.AI

Tech Stack: ASP.NET Core, REST API, OpenAI API, LlamaIndex, Prompt Engineering

- Integrated an OpenAI-powered service into the backend to accurately transliterate application text into Bangla.
- Implemented OAuth 2.0 authentication for Google and Microsoft, using the Factory pattern to instantiate the correct provider client and the Strategy pattern to encapsulate each provider’s authentication flow, enabling secure single sign-on with pluggable support for future providers.
- Built a LlamaParse-based template engine that extracts content and structure from uploaded documents and maps them into reusable templates, enabling automated processing of similar documents.
- Designed the document-processing pipeline using the Strategy pattern to route PDF, Excel, and CSV files to dedicated, independently testable extractors — making new file formats pluggable without modifying existing code.

Project: Bengal Airlift Dashboard

Tech Stack: ASP.NET Core 9, EF Core, Dapper, GraphQL, Hangfire

- Took ownership in the final phase: collaborated with clients to design and implemented reports by data syncing using Airbyte, ensuring seamless integration and display of synchronized data in dashboards.
- Built file upload/download endpoints with template processing and integrated external APIs for automated report generation using scheduled jobs with Hangfire.
- Optimized GraphQL resolvers for multi-SBU queries and implemented services for all business clusters with extended ledger update logic.
- Learned GraphQL server development using Hot Chocolate and gained hands-on experience with Clean Architecture principles for building scalable enterprise applications.
- Added manual data import functionality and enhanced query handling to support both mock and real data scenarios for flexible testing and production environments.
- Fixed broken multi-device logout by migrating from a single per-user token column to a dedicated refresh-token table linked one-to-many to the user table, so each device keeps an independent session that can be revoked without invalidating the others.

Project: Pantry (Microservices Architecture - Production) — Project Lead

Tech Stack: ASP.NET Core MVC, Microservices

- Led the project as Project Lead, driving technical decisions and coordinating delivery across the team.
- Reworked the pickup ordering flow to show only available time slots and block product browsing and cart once a distribution day reached capacity, surfacing an admin-editable capacity notice instead of a confusing checkout-time failure.
- Built a date-range invoice report that sequences dry-goods and mixed orders ahead of tagged-only orders, so all dry-goods fulfillment prints together for a distribution day.
- Added composition-based invoice filtering that splits orders into independent PDF batches (tagged-only vs. standard), removing the manual sorting staff previously did by hand.
- Enhanced admin capabilities by implementing role management (client admin switching) and added category management features in the MVC-based admin panel.

Astha IT | Internship

June 2025 – September 2025

- **Project: Docomate.AI | Tech Stack: ASP.NET Core 9, REST API, EF Core, Dapper**
- Learned C# and backend architecture patterns including Clean Architecture, EF Core, and Dapper for scalable API development.
- Migrated filtering logic to Dapper, implemented date range and template name filtering, and resolved email notification issues.

PROGRAMMING ACHIEVEMENTS

Participated in **10+** national programming contests and solved **2200+** problems across Codeforces, CodeChef, LeetCode, SPOJ, and HackerRank.

Notable Contests:

- **2nd**  JnU CSE Sports Carnival Programming Contest 2023
- **4th**  JnU Intra Department Programming Contest 2022
- **11th**  UITS IUPC 2022
- **46th**  AUST IUPC 2022
- **46th**  CoU-BRACNet Inter University Programming Contest 2023
- **49th**  BUET IUPC 2022, 2023 (*JnU_ABC*)
- **54th**  SEC Inter University Junior Programming Contest 2022
- **76th**  SUST IUPC 2023 (*JnU_DholaiKhalBois*)
- **102th**  ICPC Asia Dhaka Regional Contest 2022
- **740th**  IEEEExtreme 17.0 (*4th in Bangladesh*)

Profiles:

- LeetCode 
- Codeforces **max-rating: 1645** 
- CodeChef 
- LightOJ 

PERSONAL PROJECTS

Omnitrix | MERN Stack E-commerce System

GitHub 

- E-commerce platform with product browsing, cart management, and order processing.
Technologies: React, Node.js, Express, MongoDB

Smart Attendance System | ML/DL-based Thesis Project

GitHub 

- Real-time attendance monitoring using Machine Learning and Deep Learning.
Technologies: Python

SKILLS

- **Languages:** C#, C++ , JavaScript, Java (Basic)
- **Frameworks & Technologies:** ASP.NET Core, Node.js, Express.js, React.js, Next.js, REST API, GraphQL, Microservices, Git, Linux, Docker
- **Databases:** PostgreSQL, MySQL, MongoDB

EDUCATION

Jagannath University

Jan 2019 - Oct 2024

BSc, Computer Science & Engineering

Coursework: OOP, Data Structures & Algorithms, DBMS, Computer Networking, Operating Systems, Machine Learning
